Cytometry Data Analysis: Basic Concepts and Statistics Introduction to Flow Cytometry by James V. Watson

Flow cytometry is a technique for measuring both scattered light and fluorescence from single cells at very rapid rates. Typically up to 5000 cells can be analysed per second. Using various fluorochromes this allows a cell population to be analysed for cells showing certain characteristics such as the presence of a particular enzyme, cellular constituent or other gene product. The information How To Analyze FACS Data And Prepare Flow Cytometry ...
