Noetherian Semigroup Algebras | Eric Jespers - Academia.edu

544 JESPERS AND OKNINSKI The problem of describing when a semigroup algebra $K \langle S \rangle$ is right Noetherian is much more complicated. If S is an abelian monoid, then Gilmer [6] showed that $K \langle S \rangle$ is Noetherian if and only if S is finitely generated. If S is a submonoid of a polycyclic-by-finite group, then it follows from Quinn's result [16] that $K \langle S \rangle$ is right Noetherian if and only if S
