Physics of the Pulsar Magnetosphere: A. V. Gurevich, V. S. ...

This book presents the theory of the electrodynamic phenomena that occur in the magnetosphere of a pulsar. It also provides a clear picture of the formation and evolution of neutron stars. The authors address the basic physical processes of electron-positron plasma production, the generation of electric fields and currents, and the emission of radio waves and gamma rays.

Physics of the pulsar magnetosphere

Abstract Theoretical treatments of radio pulsars have yielded a consistent view of the physical processes present in the magnetosphere of a neutron star, explaining the deceleration of neutron star rotation, the release of rotational energy in active regions, and the generation of

plasma and directed radio emission.

**Pulsar -- from Eric Weisstein's World of Physics**

Pulsars are rapidly rotating neutron stars with periods less

than  $\sim 3.75$  s. When they were first discovered at the

radio telescope at Jodrell Bank, England, their origin was

unknown and they were thought to possibly be signals

from extraterrestrials. As a result, the first pulsar was

named LGM-1, with LGM standing for "Little Green

Men."
